Abstract (en)
[origin: EP0572988A1] A striking plate (1) for fixed attachment in the rebate region of the lower horizontal fixed-frame transom of windows or doors (20, 21) or the like is proposed, the said striking plate cooperating with a catch (24, 24a, 24b) located at the lower wing end and itself connected fixedly to a displaceable actuating rod of the wing, in order thereby to lock the wing in the closing position (A), make it possible to transfer the wing into the tilted position (B) or render the catch (24, 24a, 24b) ineffective for the purpose of the parallel set-off (C) of the wing. <IMAGE>
