Abstract (en)

[origin: EP0573085A1] A photoconductive recording material containing a support and a charge generating layer (CGL) in contiguous relationship with a charge transporting layer (CTL) containing a n-charge transporting material (n-CTM), wherein the binder of said charge generating layer (CGL) is made insoluble in methylene chloride by crosslinking, and said binder is composed essentially of a binder composition hardened under the influence of moisture and prepared by mixing the components (A) and (B) as defined in the description.
