Abstract (en)  
The invention relates to a trigger device for the firing of a firearm (1) equipped particularly with a magazine (8) for ammunition (9), with means making it possible to cause the ammunition to pass from the magazine to a chamber (4) of the firearm (1), and with a trigger (14). The device comprises a reference means (20, 21), such as gyrolasers, making it possible to locate a target in a plane, a computer (19) associated with electronic processing means, making it possible to compute a mean target-aiming point from data supplied by the computer (19) and to authorise firing, an ignition circuit (28) triggering the firing of an ammunition piece located in the chamber (4) of the firearm by means of an ignition mechanism (29). <IMAGE>
