Abstract (en)
[origin: WO9215168A1] A cordless telephone communication system is provided which includes a plurality of subscriber cordless telephones (12) capable of communicating with a PSTN (16) through a plurality of remotely located public base stations (20). Each public base station (20) has a message center which includes accessory devices such as facsimile machines and printers, for providing services which are generally available in an office environment. The subscriber may use the message upon validation of a billing account which incurs charges associated with the usage of the message center.
