Abstract (en)
[origin: EP0573749A1] In an intermittent heating apparatus for plasticized fluids in injection or similar moldings, heating medium passages (18) are located outside the electric resistance heating tubes (12) for a liquid or gas to pass therethrough while being in contact with the outer surfaces thereof, also provided is a heating/cooling device (34) having both a high temperature heating medium heated to a high temperature close to the temperature at which said reaction of the raw material is rapidly promoted and a low temperature heating medium of a temperature range where the promotion of said reaction of the raw material can be neglected. <IMAGE>
