Abstract (en)

[origin: EP0574333A1] The subject of the invention is a massage device which operates by application of alternate pressures on certain parts of the body of a patient. This device, which comprises a plurality 14 of chambers, which are alternately inflatable, a pressurised fluid source 13 and an intermediate fluid control member 1, is characterised in that it comprises an additional fluid member 7, similar to the first, the inflatable chambers being pipes distributed in two groups 15, 17, and 16, 18, so as to be connected in pairs by means of the two fluid members 1 and 7, the said fluid members 1 and 7 being connected to the chambers 14 and to each other in order to impart an undulating massage effect to the device. <IMAGE>
