Abstract (en)

The procedure can be applied to pavements composed of tiles laid out at the same level, with spaces in between and low relieves in their upper surface. The whole pavement will be covered subsequently with a fine layer of a settable mass which fill up the joints and bass relieves and it will be polished completely until reaching the surface of the tiles which will have their original appearance, whereas the joints and low relieves will adopt the polychrome finishing of the filling. It allows to obtain decorated slip-proof pavements and to rehabilitate pavements. <IMAGE>
