Abstract (en)
[origin: WO9215999A1] The inductive superconducting current accumulator (2) proposed is characterized in that it comprises an inner coil (4) with windings of superconducting material and an outer coil (6), also with windings of superconducting material, wound round the inner coil (4) in the opposite direction a certain distance from the inner coil so that the same but opposite magnetic flux prevails in the annular gap (12) between the inner coil (4) and the outer coil (6) as in the interior (14) of the inner coil (4).
