Abstract (en)

[origin: EP0574820A1] The electric instantaneous heater (1) has a box-shaped housing with a cold-water inlet (2), a control arrangement (3), a heating section (5) and a hot-water outlet (7). Cold-water inlet (2) and hot-water outlet (7) are connected movably to the heating section (5) via flexible, preferably electrically insulating lines (4, 6). In the case of a fixed position of the heating section, inlet and outlet can therefore be adapted positionally to a predetermined water-connection pattern, if appropriate even crossed over. The hood of the housing can therefore be arranged in any arrangement in relation to the hot-water tapping point in order to satisfy aesthetic and ergonomic requirements. <IMAGE>
