Abstract (en)
[origin: EP0575268A1] It is characterised in that: - it comprises at least two assemblies (1, 2) which each consist of a laminated and glued layer formed by slats of rectangular cross-section which are juxtaposed side by side without being offset in relation to one another; - it has a structure which is such that, if a bending force is considered to be exerted on the upper part of the said material, at least the outer layer (lower layer) subjected to the greatest tensioning during this bending stress is formed by slats (2) glued to each other in the vertical direction (direction of bending) against the lower surface of the layer which is adjacent to it. <IMAGE>
