Abstract (en)  
[origin: WO9216319A1] The description relates to a sheet-metal bending device (1) with two bending punches (19, 20) interconnected so as to pivot which are arranged side by side and at least one of which is pivotably arranged and coupled to a pivot drive (24) and with a counter punch (10) opposite the bending punches (19, 20) and arranged to be linearly movable between a working position on the sheet metal (18) and a withdrawn position, about which the sheet metal (18) is bent in the working position, whereby the two bending punches (19, 20) are directly secured together via a hinged joint (53) in the working region along their edges which face each other in the inoperative position.
