Abstract (en)  
[origin: WO9216083A1] The invention relates to a device for controlling the operation of a heating apparatus (10) to heat a food product (5) placed in a housing (16) of said heating apparatus (10). According to the invention, the device is comprised of optical and/or optoelectronic means (21, 22-A) to read a distinctive sign (6) inherent to the product (5) or to its packaging, a processing module (30) having data processing means (40, 42) to compare the electric signals issued from the reading of the distinctive signs (6) with stored reference values corresponding to predetermined reference signs affected to the products or packaging thereof, and electronic or electrotechnical means (43) to generate controls for operating the heating apparatus (10), if the distinctive signs (6) read correspond to the reference signs.
