Abstract (en)
[origin: EP0575858A2] The invention relates to a centrifuge with a separation chamber (1) to which a line (2) is permanently connected, with a main rotor (3) on which the separation chamber (1) can be mounted so as to be rotational in relation to the said rotor (3) by means of a bearing arrangement, and with a guide device (4) on the main rotor (3) for guiding the line (2). In order to be able to insert the separation chamber into the main rotor in a simple and controlled manner, there is provision according to the invention for the bearing arrangement to comprise an area which is open in the radial direction for insertion of the line (2) into the main rotor (3) in the region of the main rotor (3). <IMAGE>
