Abstract (en)

The invention relates to a light-transmitting element for a roof construction made of a polymeric material which transmits light, which element has a substantially even surface at its bottom side and which is provided with trapezoidal or corrugation-shaped parts at its upper side, whereby the element is built up of two parts, that is an upper plate (2), which is open at its bottom side and which is provided with trapezoidal or corrugation-shaped parts (4), and a double-walled bottom plate (3) comprising channels (6), which bottom plate (3) is secured against the upper plate (2). The invention also relates to the roof construction and the upper plate and/or bottom plate according to the invention. <IMAGE>
