Abstract (en)

[origin: WO9314466A1] When through a terminal (29) display of a drawing to be edited is requested, the drawing is taken out from a means (27) for storing common files provided in the host computer (21), and is loaded in a work space (23) and a picture memory (32) of the terminal (29). Then, the data of the drawing to be edited is overwritten in a frame buffer (33), and the drawing is displayed on a CRT (34). In response to the request of the terminal (29) for specifying lines to be edited in the drawing, the corresponding lines are retrieved from the work space (23), and the results thereof are expanded in an editing space (20). The lines to be edited in the editing space (20) are edited in response to the edition request of the terminal (29) and the data of the edition of the lines are added to the picture memory (32). The data of the lines in the picture memory (32) is overwritten in the frame buffer (33), and the drawing edited is displayed on the CRT (34).
