Abstract (en)  
[origin: EP0576801A1] Measuring apparatus for detecting sheets in the region of the front stops (6) of a paper-sheet-processing machine, having means for accelerating the sheets (20), aligned along their front edge on the front stop (6), to a higher speed for transfer to a paper-sheet-processing unit having a scanning region perpendicular to the sheets conveying plane for detecting the parallel sheet planes which intersect the lay surface (7) of the front stops (6). Said scanning region is delimited by two scanning means, of which one forms the lower delimitation of the scanning region during scanning and the other forms the upper delimitation of the scanning region during scanning. <IMAGE>
