Abstract (en)
[origin: EP0576808A1] The invention relates to a grating which is composed of load-bearing bars (1) which are parallel in the longitudinal direction, are cut to a predetermined length and have a spacing value T1 and/or of transverse bars (2) which are parallel in the transverse direction, are cut to a predetermined width and have a spacing value T2. In said grating, starting from a central longitudinal axis, said bars are arranged on both sides at constant spacing, if appropriate with the exception of the two outer end spacings, and/or, starting from the outer load-bearing bars (7, 8) and going towards a central longitudinal axis (3), said bars are arranged at constant spacing, if appropriate with the exception of the spacing in the central longitudinal plane.
