Abstract (en)

[origin: EP0576813A1] In the case of an electromagnet which is provided with an armature and whose rod is used for carrying out control processes, the production of the armature and of the housing is intended to be simplified, and thus made cheaper, and scrap (wastage) is intended to be largely avoided. For this purpose, it is proposed that the rod pass through the armature over its entire length and consist of plastic, being produced, for example, by injection moulding the rod in the armature. <IMAGE>
