Abstract (en)
[origin: EP0576965A1] The timepiece comprises a base piece (1) of plastic, at least one element (2) fixed on this base piece, and means for fixing this element on the base piece, which comprise a stud (34) driven via one of its ends (40) into a through hole (32) in the base piece (1). The other end (12) of the stud (34) is engaged in a hole (10) in the element (2), and is squeezed against it to form a riveting. Finally, the base piece (1) is shaped so as to allow access to the driven end (40) of the stud with a tool (A) in order to provide a rigid support beneath the stud during the operation for riveting the other end (12) thereof. <IMAGE>
