Abstract (en)
A link strap (13) for a wrist-watch is to be variable in length and designed with a hollow space (24) which extends in the longitudinal direction (25) of the strap, is also accessible at a later date, and into which, in particular, the magnetic antenna of a radio receiver can be placed. For this reason, the strap links (18) consist of bases (32) with recesses (17) which pass through them in the shape of channels and are covered by U-shaped covers (26) engaging over them. In the longitudinal direction (25), outer cheeks (33) of the cross-sectionally U-shaped bases (32) engage in the manner of hinges over inner cheeks (34) of bases (32) which are adjacent in the longitudinal direction (25) of the strap, the torsion-resistant and tension-resistant, sturdy connection being secured by inserted journals (31). During assembly, each cover (26) which is attached obliquely covers, with its yoke (44), the claws (53) projecting from the adjacent edge of the already assembled cover (26) in order then to be pressed onto the base (32) along a curved guide (50/51) with pivoting movement. <IMAGE>

Abstract (de)
Ein Armbanduhren-Gliederarmband (13) soll langenveranderlich und mit einem auch spater noch zuganglichen, sich in Armband-Langsrichtung (25) erstreckenden Hohlraum (24) ausgestaltet sein, in den insbesondere die magnetische Antenne eines Funkuhren-Empfangers eingelegt werden kann. Dafur bestehen die Armband-Glieder (18) aus Boden (32) mit kanalformig durchlaufenden Aussparungen (17), die von bergreifenden U-formigen Deckeln (26) abgedeckt sind. In Langsrichtung (25) bergreifen uere Wangen (33) der im Querschnitt U-formigen Boden (32) scharniermaig innere Wangen (34) von in Armband-Langsrichtung (25) benachbarten Boden (32), wobei die torsions- und zugfeste stabile Verbindung durch eingesetzte Drehzapfen (31) sichergestellt ist. Bei der Montage uberdeckt jeder schrag angesetzte Deckel (26) mit seinem Joch (44) die vom benachbarten Rand des schon montierten Deckels (26) vorstehenden Krallen (53), um dann langs einer Bogenfuhrung (50/51) unter Schwenkbewegung auf den Boden (32) aufgepret zu werden. <IMAGE>
