Abstract (en)

[origin: EP0577136A1] In an apparatus for applying glue, having a heatable storage shaft for the glue with a lower discharge opening closable by means of at least one adjusting slide, in order to make rapid and simple switching from one type of glue to another and cleaning possible with a technically simple construction, the storage shaft (1) has, over its height, in each case a substantially constant cross-section and consists of at least two shaft parts (2, 3) which are sealingly connected to one another along at least one separating plane (4) running approximately parallel to the shaft axis by means of a quick-release connecting device. <IMAGE>
