Abstract (en)

[origin: EP0577939A1] In a support for the subdivision of the interior of a cabinet, in particular a support for arrangement in the interior of a refrigerator (10) which, in order to make possible the storage of tall articles to be refrigerated, such as bottles or the like, is subdivided at least once transversely to its insertion direction into individual sections (16, 17) which are provided with frames (18, 19) which are arranged on their edges and serve as reinforcement and the frame sections of which, assigned to the side walls of the interior, rest on bearing elements (13) on the side walls, the individual sections (16, 17) of the support (15) which is subdivided transversely to its insertion direction are interconnected detachably to form a support which has an essentially continuous set-down surface (20). <IMAGE>
