Abstract (en)  
[origin: EP0578099A1] In order to connect a coaxial plug connector element to a male connector strip, the plug connector element is provided at its end on the connection side with, for example, four outer contact laminates (3) and an inner conductor socket (10) which is positioned precisely with respect thereto. In consequence, when the plug connector element is plugged onto a pin area (5) having 9 pins, a connection is produced between the outer contact laminates (3) having, for example, four pins (6) located on the corners of a square, and a centre pin (9) of the pin area (5) having 9 pins, of the male connector strip. <IMAGE>
