Abstract (en)
[origin: EP0578247A1] The present invention relates to a multi-purpose container or a sack-like container which is suitable for a multiplicity of applications. The container (1) has a container bottom (5) and flexible container side walls (3) which can be joined together by means of a closure device (15) in the region of the outer edge to form a container interior, the container side walls (3) being pivotable without folds into the plane of the container bottom (5) to form a closed flat surface. The container (5) and/or the container side walls (3) have a circular or polygonal outer contour. The closure device is designed as a cord or strap (17), the cord or the strap (17) being guided through at least one loop (19). The sack-like container (1) is distinguished by the fact that the container bottom (5) has a reinforcement insert, and that the side walls (3) are divided into an outer region (11) and an intermediate region (13) arranged between the outer region (11) and the container bottom (5). <IMAGE>
