Abstract (en)

[origin: EP0578304A1] Process for bleaching a chemical paper pulp to a brightness of at least 89 DEG ISO, consisting in subjecting the pulp to a multistage treatment sequence comprising a final stage of bleaching with hydrogen peroxide in alkaline medium performed in the presence of at least one stabilising agent and at a pulp consistency of at least 25 % by weight of solids content, the stages preceding this final stage having purified the pulp so that its manganese content does not exceed 3 ppm by weight relative to the solids content and that the pulp has been delignified beforehand to a kappa value not exceeding 5.
