Abstract (en)
The invention relates to a puzzle of the type in which a plurality of pieces are moved along rows or columns to obtain a definite combination in which the pieces (3) are slideably assembled in contact with each other within grooves made on the surface of a sphere (1) along maximum circle circumferences perpendicular to each other. The improvement consists in a structure substantially made up of a central element (5), of a plurality of sphere sectors (2) and of a locking element or slider (10).
