Abstract (en)

The described feeding device comprises a movable support unit (2) having at least two supporting cradles (9) each adapted to carry a fabric roll (10), a power unit (17) actuating the support unit (2) for alternately and selectively transferring each supporting cradle (9) between a first operating position ("A") in which it unwinds and rewinds the respective fabric roll (10) and at least a second operating position ("B") in which the fabric roll (10) is loaded and unloaded. A gripping and pulling unit (25) disposed intermediate the support unit (2) and the cutting table (16) gets hold of the fabric (10a) from the roll (10) maintained in the first operating position ("A") and operatively engages it on the cutting table (16). <IMAGE>
