Abstract (en)

[origin: EP0579024A1] In order, in the case of multi-storey prefabricated buildings comprising prefabricated unitized units which each exhibit a floor slab with a frame comprising steel profiles, rising column elements at the corners, a top ceiling frame and ready-mounted outer walls on the end sides, to integrate an elevator shaft before installation, the invention provides that the individual unitized units to be stacked one on top of the other exhibit, adjacent to a longitudinal wall (1), rectangular cutouts (7, 15) which are aligned from unitized unit to unitized unit, are located in the floor slab (A1) and in the ceiling slab (B1) and are delimited by a shaft frame (8, 9), and that there are arranged, between the corners of the shaft frames (8, 9), steel profiles (20 to 23) which respectively project up from the floor and ceiling slabs (A1, B1) and have wall claddings (25), located therebetween, on three sides and the elevator door (26, 27) on the access side. <IMAGE>
