Abstract (en)

[origin: WO9218609A1] The invention relates to membranes with immobilized microorganisms thereon and/or therein wherein the microorganisms are alive or in a viable form, and the membranes are of porous material such that the microorganisms, particularly bacteria, can settle in the pores, and such that the release of the microorganisms is not significant. The invention also relates to new reactors, enabling to eliminate metals and/or to degrade xenobiotic organic compounds in an effluent containing them or the synthesise compounds.
