Abstract (en)

[origin: EP0579914A2] Process for coating a transparent support plate, if appropriate made of clear acrylic glass, with a metallic embossing-foil coating, in which a colour layer is applied to one side of the support plate and a metallic embossing foil is applied, adjacent to the colour layer, by the roller embossing process, characterised in that, at least in a specific region of the support plate, a colour layer is arranged on at least one colour transforming the shade, produced per se by the embossing foil, of the coating to a different shade. <IMAGE>
