Abstract (en)

[origin: EP0579938A2] A method for producing a belt band having two identical genuine selvages by weaving on equipped with two weft-thread insertion needles working in opposition and with at least two sheds both with each of the selvages and for the band middle, and, if necessary, for two closing threads in a symmetrical arrangement, in which method, along with an economical production and the greatest possible care of the material, round selvages equally attractive on both sides are achieved and a curving of the band during weaving being prevented, in that each of the two selvages is woven respectively by means of one of the two weft-insertion needles, and in that, in addition, an insert consisting of at least one warp thread and influencing the visual appearance of the belt band is woven into the belt band. <IMAGE>
