Abstract (en)

[origin: EP0579941A1] The invention relates to a device for securing and changing the position of a cylinder packing of a printing unit cylinder with an axially parallel gap. At least one clamping spindle is provided for clamping a cylinder packing, a shaft having a toothing being engaged with toothings on the clamping spindles, and the shaft comprising a receiver for an adjusting tool on the part facing the gap opening. Clamping spindles (3, 4) are movable by means of an adjusting drive (6, 9; 18), received at the end face of a printing unit cylinder (1), in such a way that a cylinder packing (29) can be clamped in the circumferential direction simultaneously at its leading edge and trailing edge and the position of the cylinder packing (29) on the printing unit cylinder (1) can also be adjusted by means of actuators (16, 19, 20, 22, 23) in a defined manner on at least one of the clamping spindles (3, 4). <IMAGE>
