Abstract (en)

[origin: EP0580251A1] In the case of a shaver (1) with a shaving head (10) with a foil-like upper cutter (71) and a lower cutter (73) which rests against the latter and can be driven by a block-shaped drive part (75), a seal (107) against hair dust is formed which is connected to the drive part (75), takes the form of a hood and a trough and has four side walls (108, 109, 110, 111). The seal (107) against hair dust has a stepped arrangement (126) which extends over all four side walls (108, 109, 110, 111), the said stepped arrangement (126) extending in an undulatory, preferably serrated manner, at least on the two side walls (108, 109) which have the largest area. <IMAGE>
