Abstract (en)

[origin: EP0581098A1] The invention relates to a procedure for manufacturing a ski which comprises a first stage of preparing a solid core made from synthetic foam and a second stage of assembling the core with the various elements constituting the ski. The first stage consists in injecting or pouring into a mould (6, 60, 62), having the final shape of the core (2) to be obtained, the components of a hardenable and expansible foam (8), during which stage a solid bonding film (5) having good qualities of adhesion with the foam as well as with the elements intended to enter into contact during the second assembly stage is arranged against the walls of the said mould. <IMAGE>
