Abstract (en)

[origin: EP0581102A1] The invention relates to a drum collector, on the circumferential surface of which sheets can be collected and held firmly by means of clamping elements (8). The clamping elements (8) are adjusted by means of drive means (10, 12) coaxial to the drum axis. The clamping elements (8) can be withdrawn into the drum contour to such an extent that the sheets (22) can be removed from the circumferential surface with the front edge released by the clamping elements first. After the release of the sheets (22) by the clamping elements, the sheets (22) are held firmly against the drum (2) by additional pressing rollers (34, 36). <IMAGE>
