Abstract (en)

[origin: EP0581209A1] A ship's crane is proposed, in particular for transporting, lifting and lowering pallets which are preferably arranged in a cage connected to the lifting gear. Here, the crane structure is movable on tracks or the like transversely to the longitudinal direction of the ship, and the area of the crane structure accommodating the pallets, in particular the cage, including the respective hatch and the displacement path, is surrounded by essentially fully enclosed weather protection. <IMAGE>
