Abstract (en)
[origin: FR2687643A1] Fluid dispensing container (1) fitted with a dispensing valve (2) carrying an outlet means (3) through which the fluid is dispensed upon the actuation of a push-button carried by the valve; a variable volume conditioning chamber (4) defined by a movable wall (5a & cir& _)subjected to the internal pressure of the container, said chamber communicates, on the one hand with the dispensing valve (2) and , on the other hand, with the inside (18) of the container through delay means embodied as a high charge lost passage. When the conditioning chamber (4) is empty, the communication between the dispensing valve (2) and the inside (18) of the container is interrupted.
