Abstract (en)

[origin: WO9219322A1] The object of this invention is a valve arrangement of a protective respirator intended for protecting the wearer against dust or gases. The invention sets out how the exhalation air is guided as soon as possible out of the face section (7) and further how the air can be caused to pass through an air enclosure (11) in between the face section (7) and the frame section (3).
