Abstract (en)
[origin: WO9220259A1] Cabinet equipment including a door (2), sidewalls (3) and a bottom (4). An extension module (5) placed inside the cabinet moves automatically out or in on opening or closing of the door (2). The equipment comprises two sliding ledges or rails (6) mounted on the bottom (4), parallelly to each other. The extension module (5) housing e.g. a refuse bucket is supported by the ledges (6) through cylinder bearings or runners (8), inserted into the ledges (6) and fixed along the two longitudinal side edges of the extension module (5). The underside of the extension module (5) has a curve shaped groove (9) and the innerside of the door (2) fittings (10) with an arm with an upwards directed pin (12) running in the groove (9). The placing and curve shape of the groove (9) provides a co-operation with the pin (12) whereby the extension module (5) automatically runs in the ledges (6) on opening or closing of the door (2).
