Abstract (en)

[origin: JPH06166934A] PURPOSE: To enable high-speed control of a jacquard with compact constitution by impressing control voltage to piezoelectric transducers by each of respective knitting cycles in accordance with pattern data and applying desired displacement to guide needles. CONSTITUTION: The jacquard controller of a warp knitting machine 1 having guide needles 3, 4 and 5 mounted at guide bars 6, 7 and 8 constituted movably back and forth for the purpose of desired underlap and overlap by knitting needles 2 arranged in one row and a patterning device inputs the output signal of a rotating angle detector 14 to a computer 15 and outputs control signals via a control line 12 to the piezoelectric transducers 9 and 10 constituted as bending transducers disposed at the knitting needles 5 at each of respective knitting cycles in accordance with the pattern data of a pattern memory device 16 belonging to this computer 15, thereby impressing the control voltage to the transducers. The desired displacement is thus imparted to the guide needles 3, 4 and 5 and the jacquard is controlled.
