Abstract (en)

[origin: US5364202A] The holding device for hollow-cylinder printing formes comprises two adaptor rings (4) which are pressed into the free ends of the hollow cylinder (1) so as to form a seal and which are held under these circumstances in a latched condition by a spring-preloaded latch mechanism (5, 6). Because of the centred adaptor rings (4) a bulky and expensive mounting by means of plug-in spindle cone pieces and pressure pieces is unnecessary.
