Abstract (en)
[origin: EP0583715A1] The invention relates to an electrical switching apparatus (10), especially a switch or pushbutton, having a housing (12) arranged with connecting conductors (16) located therein having stationary contact elements (18, 20, 22) and having at least one moving contact element, as well as having a switching spring (14) which is held in the housing (12) and interacts with the at least one moving contact element. In this case, the switching spring (14) forms a structural unit with the at least one moving contact element, which structural unit is inserted into the housing (12) and is sealed in an airtight manner. The stationary contact elements (18, 20, 22) are integrally connected to the connecting elements (16) which are extrusion coated or mechanically held in the housing. <IMAGE>
