Abstract (en)

[origin: EP0584026A1] Assembly for coupling to the same bogie the two opposite ends of two successive wagon structures having a V-shaped front end (18) articulated on the bogie and an open rear end (13) consisting of two parallel arms (14, 15) has a crossmember (26) which pivots on the bogie and is integrated in the V-shaped front end of the first wagon structure and by means of which the preceding wagon structure is coupled, the said pivoting crossmember (26) comprising, at each of its ends, a receiving support (30, 31) equipped with an immobilising means for each of the ends of the arms of the rear end (13) of the preceding wagon structure. The ends of the arms (14, 15) each have a junction means cooperating with each receiving support. This invention is useful to the manufacturers of road or rail transport stock. <IMAGE>
