Abstract (en)

[origin: WO9314509A1] Plane sheets which have the same shape as the magnetic circuit (1) and are relatively movable along their contact surface are arranged in a stack. The stack is grasped and part of the circuit is bent out of alignment with the plane of the sheets to enable a coil (3) to be placed on a portion of the circuit which is next to the air gap (2), whereafter said part is bent back into alignment with said sheets.
