Abstract (en)

[origin: WO9318215A1] A separator has a separating member for separating the first drop wire (LA) of a drop wire stack (LS). This separating member has on the one hand separating means (34) which apply pressure on one of the front edges of the drop wire (LA) to be separated, thus buckling said drop wire (LA), and on the other hand transport means (37) designed to enter the gap formed by buckling the drop wire and to carry away the separated drop wire (LA') from the stack (LS). This separator allows all kinds of drop wires to be separated without difficulty at a high frequency.
