Abstract (en)

[origin: EP0584542A1] The invention relates to a method and a device for printing objects (34) using screen printing, the printed image applied to the respective object being dried by UV rays given off by at least one UV radiation source (58). In this case, the printed image applied is dried during a transporting movement carried out by the object in order to be transported from one point to another point after the printing operation. The radiation source giving off the UV rays is moved with the object in its direction of movement at least during part of the transporting movement in such a way that the drying of the printed image takes place during this process. <IMAGE>
