Abstract (en)
[origin: WO9220348A1] Colorectal carcinoma is treated by administering oligonucleotides having a nucleotide sequence complementary to at least a portion of the mRNA transcript of the human c-myb gene. These "antisense" oligonucleotides are hybridizable to the c-myb mRNA transcript.

Abstract (fr)
On traite un carcinome colo-rectal en administrant des oligonucléotides présentant une séquence nucléotidique complémentaire à au moins une partie de la transcription de l'ARNm du gène humain c-myb. Ces oligonucléotides peuvent être hybridés avec la transcription d'ARNm de c-myb.
