Abstract (en)

[origin: EP0585531A1] The invention relates to a door, window or the like composed of hollow reinforced plastic sections, with one or more fastenings which are embedded into the hollow section and which have a closing member preclosing via the cover rail and penetrating into the opposite fixed frame, and proposes, for achieving an especially stable solution, to provide an attachable additional part (29, 39, 48, 57) which increases the seat of the fastening housing (18, 19) in the hollow plastic section (2) by enlarging the supporting surface between the two parts.
