Abstract (en)
[origin: WO9319645A1] An active dynamic seat has a base, a stiff intermediate piece linked to the base and a seating part linked to the intermediate piece. The seating part (3) is rigidly secured to the intermediate piece (2) and the intermediate piece (2) is mounted in such a way on the base (1) that its central area can tilt in all directions and slide vertically. In addition, one or several restoring devices (11) are arranged on the intermediate piece (2), in the area below the mounting point on the base (1), for restoring the tilting movement and at the same time the vertical displacement of the intermediate piece (2) and the seating part (3).
