Abstract (en)
[origin: WO9319647A1] An active dynamic seat has a base, an intermediate piece linked to the base and a seating part linked to the intermediate piece. The seating part (3) is fixed to the intermediate piece (2) and the intermediate piece (2) is linked to the base (1) by a single bearing in a substantially fixed manner in the vertical direction and in a tilting manner in all lateral directions. The tilting movement is limited in all directions by a stop and one or several restoring devices are provided to restore the unloaded intermediate piece to the vertical.
